Sequence 4747, Application US/09864761
Patent No. US20020048763A1
GENERAL INFORMATION:
APPLICANT: Penn, Sharron G.
APPLICANT: Rank, David R.
APPLICANT: Chen, Wensheng
TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACT! PROBES USEFUL FO
TITLE OF INVENTION: GENE EXPRESSION ANALYSIS BY MICROARRAY
FILE REPERENCE: Acomica-X-1
CURRENT APPLICATION NUMBER: US/09/864,761
CURRENT FILING DATE: 2001-05-23
PRIOR PPLICATION NUMBER: US 60/180,312
PRIOR FILING DATE: 2000-02-04
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           473 GCCCTTCCTGCTGTATCTCTAGCTGTTGCAAACCCAGCTGCTGCCAGACCACCTGCTGCTGCC

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1, P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09
                                                                                                                                                                                                                                                                                                                                                                                                                          autoimmune diseases (e.g. neoplasms of the breast or liver), hyperproliferative disorders (e.g. neoplasms of the breast or liver), cardiovascular disorders (e.g. cardiac arrest), cerebrovascular disorders (e.g. cardiac arrest), nervous system disorders (e.g. cerebral ischaemia, angiogenesis), nervous system disorders (e.g. Alzheimer's disease), infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infection). The FDD-containing proteins are used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. They are used in diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological symptoms associated with the disorders and in diagnostic immunossays
                                                                                                                                                                                                                                                                                     The present sequence is human cDNA clone HWHQC55 encoding four disulfide core domain (FDCD)-containing protein. FDCD sequences are used to prevent, treat or ameliorate skin disorders such as congenital disorders e.g. moles, freckles and haemangiomas as well as integumentary tumours (keratosis, basal cell carcinoma, malignant melanoma), injuries and inflammation of the skin, atherosclerosis, urticaria, eczema, photosensitivity, autoimmune disorders (lupus erythematosus, scleroderma), keloids, striae, erythema, petechiae, purpura and xanthelasma. They are also used in the diagnosis and treatment of diseases and disorders of hair and epithelium,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GTCTGCTCTGACCAGAGCTGTGGTCAAGGTCTCGGCCAGGAGGCTGCTGCCGCCCCAGC

                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (11). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed gones. (1) is useful in gene therapy techniques to restore normal activity of (11) or to treat disease states involving (11). (11) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (11) and its binding partners are useful in medical imaging of sites expressing (11). (1) and (11) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in capporatics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human call and polynucle data for this patent did not appear in the printed sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAW18323-AAM80302) that exhibit activity elating to cytokine, cell prollferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM7823-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, mamatopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    treatment of cancer, leukaemia, nervous system disorders, arthrilis and

The Process of the American associated nuclear antique (LANA) gene. KSHV is a second and belongs to the rhadino virus, or as Human Herpes Virus 8 (HHV8) and belongs to the rhadino virus, or againa-2 herpes virus class. The LANA protein is necessary for file efficient persistence of rhadino virus bnA in mammalian cells. Persistent cardino virus infection is implicated in a variety of diseases e.d. Kaposi's Sarcoma (KS), Primary Effusion Lymphoma (PEL) and multicentric castleman's disease. In addition, KS is a common malignancy in HIV parists in host cells in a latent form One of the few genes expressed from the latent viral DNA is LANA. LANA associates with comes expressed from the latent viral DNA is LANA. LANA associates with the RACE, thereby providing a tethering function: the KSHV DNA episome is "tied" to the host chromosomes. This allows the viral DNA to persist in the host chromosomes. This allows the viral DNA to persist in the heavy child the rhadino virus careen and identify molecules that inhibit LANA interaction with RVCAE, thereby interfering with the latency cycle of this virus. Potential antiviral trealments for the above mentioned diseases may therefore be based on LANA dereyulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2077

protein suitable for tethering DNA to Histone H1. Methods for screening for compounds which are agonistic or antagonistic for the tethering of viral proteins to histone H1 and DNA binding sites are useful for developing the method of viral transfer. The composition has applications to gene therapy, including the treatment of multiple sclerosis. Parkinson's disease, Huntington disease and diabetes. The present sequence represents the nucleotide sequence of the Kaposi's sarcoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  161

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CTGCTGCTGCTCATCCTGCTGCTGCTCATCCTGCTGCTGCTCATCCTGCTGCTGCTGCTCATC 1957
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 161
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a system (A) for maintaining a plasmid as an episome in mammalian cells, comprising the rhadinoviral sequence LANA (latency-associated nuclear antigen) of 3489 base pairs (see ABA93487, S1) expressed in the cell, and the rhadinoviral sequence (rhadinoviral cis-acting element) of 801 base pairs (see ABA93488, S2) present in the plasmid Also describes is a method for maintaining a closed circular DNA in a cell by expressing (S1) in the cells and having (S2) as a cis-acting and maintenance sequence in the DNA. (A) is particularly used in gene therapy (or other gene transfer applications) that uses mammalian cells in which LANA is expressed. (A) improves persistence of gene therapy vectors in cells. The present sequence encodes Kaposi's sarcoma-associated herpesvirus (KSHV, also called human herpesvirus 8) LANA protein, which is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CAGCTCCTGCTGTGTCTGTCTGTCTGACCAGAGCTGTGGTCAAGGTCTCGGCCAGGA 101

                                                                                               herpesvirus (KSHV) LUR (long unique region). This fragment contains coding regions for ORF65 which encodes capsid protein IV, ORF66, ORF67 which encodes tegument protein IV, ORF68 which encodes a glycoprotein, ORF69, KI2 which encodes kneedes a glycoprotein, ORF73 which encodes immediate early protein (IEP), K14 which encodes (cyclin D), ORF73 which encodes immediate early protein (IEP), K14 which encodes (cyclin D), ORF74 which encodes tegument protein/FGARAT, K15. KSHV is a new human encodes tegument protein/FGARAT, K15. KSHV is a new human most common form of neoplasm occurring in persons with acquired immune deficiency syndrome (AIDS). The DHFR protein is useful for vaccination, prophylaxis, diagnosis and treatment of a subject with Kaposi's sarcoma and for detecting expression of a DNA virus associated with Kaposi's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CATCTGCTGCGGCAGTTCTTGCTGCTGAAGCTGCTCTCGGATTTGTGCACCTTCTTG

KSHV is also known as human herpes virus 8 (HHVB). This sequence contains the DNAs of the invention which encode KSHV polypeptides selected from: (a) viral contains the DNAs of the invention which encode KSHV polypeptides selected from: (a) viral interleukin 6 (IL-6); (c) viral IRF]. (d) complement-binding protein: glycoproteins B, M or L; (d) capsid protein IV encoded by ORFF3. Eabelled probes for the nucleic acid, proteins encoded by orFF3. Labelled probes for the nucleic acid, proteins encoded by it, and antibodies (Ab) specific for the proteins are useful for detecting HHVB. specifically for diagnosis of Kaposi's sarcoma, in body (inids or tissue samples. HHVB infections can be treated with antisense or triplex forming molecules or agents that bind specifically to the cortism. Ab may be used for prophylaxis or treatment of HHVB infection, while the protein can be used in protective vaccines. Ab may also be used to differentiate between lymphomas, and HHVB may be implicated in many other lymphoproliferative diseases such as lymphomas, leukaemia.

Con their lymphoproliferative diseases such as lymphomas, leukaemia.

Splenomegaly and mycosis fungoides. Cells and animals containing the nucleic acid are useful for drug screening. HHVB derived peptides can be used as targets for antiviral drugs, e.g. dihydrofolate reductase gene can be inhibited with methotrexate. These can also be used to determine the immune status of a patient infected with HVV. HHVB derived protein viral MIP III may be used as an anti-inflammatory agent for, france of a patient infected with HVV. HWB derived protein for e.g. the immune status of a patient infected with HVV. HWB derived protein for e.g. the immune status of a patient infected with HVP. HWB derived protein for e.g. the immune status of a patient infected with HVP. Contribution also relates to vectors and recombinant nost ceits comprising a nucleotide of the invention, methods of producing the novel polypeptides, contribodies against the polypeptides, methods of detecting the novel polypeptides or polypeptides and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have been been proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may differentiation activities, including cytokine, cell proliferation or cell differentiation activity; is negatively; laematopolesis regulatory activity; tissue growth activity; laematopolesis regulatory activity; tissue growth activities; chemotactic or chemokinetic activity; activin. or inhibin-related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or thrombolytic activities; receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis concitions, e.g., by protein or gene therapy. Such conditions include concitions, e.g., by protein or gene therapy. Such conditions include disorders, haematopoletic disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., myeloid or lymphoid cell cepair (or nucleic acids encoding them) may be used to promote wound crepair (or nucleic acids encoding them) may be used to promote wound cepair includes may be used to promote very partities may be used in the treatment of viral, batterial and fungal infections in addition to immune disorders.

Polypeptides with growth factor activity may be used to promote vells manipulate to give rise to neuroepithalial cells in culture to give rise to neuroepithalial cells in culture to give rise to neuroepithalian cells in culture to give rise to neuroepitalian cells and anomar or repeated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a
                                                                                                                                                                                                                                                                                    Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a

```
The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, varcines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating

encoded polypeptides (AAM/8132AAM/80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypublides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4
